

C.SCOPE

professional metal detectors

TECHTIPS

C.Scope is a company totally focussed on underground detection. You'll find a detector for every type of treasure hunting in the C.Scope range. Ease of use, performance, quality, and affordability are constant C.Scope watch words and nowhere is this more apparent than with the development of the CS9000HPX. In a joint development program with world renowned detector designers in the USA, C.Scope engineers discovered that a way of achieving extreme depth without unacceptable ground effects was to separate the transmit coil from the receive coil and, whilst this makes the detection of small objects impossible, large targets can be located at up to 3 metres. This makes the CS9000HPX absolutely ideal for recovering old battlefield relics from deep in the ground, also old family treasures which may have been buried to keep them from invading armies, and some industrial applications such as tracing the position of buried well heads and pipelines. The ground detection aspect of such a powerful detector is also exploited to the full in the CS9000HPX design. The machine can be used to detect underground cavities and changes in soil geology. The CS9000HPX is another powerful performer in the C.Scope arsenal of professional treasure recovery equipment.

The
CS9000HPX
Hoard Locator
can find
objects at
depths of up
to 3 metres

CS 9000HPX

Use the CS-9000HPX when you're on to something big. If you're following up some specific clues which lead you to think there might be a hoard around.

If while using your normal detector, you find some coins which seem as if they have been dragged by a plough from a deeper buried pot, you need the serious brute power of the CS9000HPX.

The optimum object size detectable by the CS9000HPX is about 20cms x 20 cms, range 1 metre, limit: up to 3 metres.

- High performance shielded antenna system
- Lightweight, durable metal construction.
- 6 x AA cell 9 volt power source.
- Battery check.
- Signal intensity meter.
- Push-button retune
- Automatic 2-speed MOTION system
- CS9000HPX is the easiest machine to operate in its class
- Ground cancellation control for max depth in all soil conditions
- Locates ground anomalies such as tunnels and wells.

Highly reactive signal intensity meter
